Heart is a muscular organ that located the center of the circulatory system. It pumps blood throughout body via blood vessels network, such as capillaries, arteries and veins. Blood is delivered to and from all parts of body by these blood vessels. At the optimal rate required to function well, a healthy heart provides your entire body with the proper quantity of blood. If disease or injury impairs your heart, your body's organs won't obtain enough blood to operate regularly. Cardiopathy, commonly known as cardiac disease or heart disease, is an hyponym for a various diseases affecting the heart. Since 2007, it is one of the major cause of death in the United States, Canada and some European countries such as England and Wales, representing about 25.4% of the total deaths in the United States. A regular electrical system and pumping capabilities of heart can be interrupted by heart disease. Diseases and statuses of the heart's muscle cause a heart difficult to work properly.
